

Day 34 — Marketing Detective 🔍

60 Days of Claude AI Challenge

Project Overview

For Day 34, I built **Marketing Detective**, an interactive marketing investigation game designed to make marketing strategy learning more engaging and practical.

Instead of simply reading marketing concepts, the user becomes a detective who investigates fictional campaign cases, studies evidence, identifies the primary marketing mistake, and receives an expert explanation with actionable improvements.

🎯 Objective

The main objective of this project was to understand how marketing decisions can be analyzed through:

- Campaign objectives
- Target audience
- Marketing channels
- Budget allocation
- Campaign metrics
- Customer feedback
- Social media performance
- Conversion behavior
- Marketing mistakes
- Strategic improvements

🕵️ User Flow

The application follows a complete investigation journey:

1. **Case Assignment**
2. **Investigation Board**
3. **Interactive Investigation**
4. **Solve the Case**
5. **Case Closed**
6. **Marketing Learning Report**

The user can replay the game and receive a randomly selected marketing case.

✨ Key Features

- 🎨 Multiple color themes
- 🟠 Claude Orange theme included
- 🕵️ Detective-style game interface
- 📁 Confidential case files
- 📌 Interactive evidence board

-  Evidence cards
-  Drag-and-organize evidence
-  Campaign performance metrics
-  Customer comments
-  Social media performance analysis
-  Primary marketing mistake identification
-  Case Closed experience
-  Marketing Learning Report
-  Randomized marketing cases
-  Save learning notes
-  Responsive design
-  Runs directly as a standalone HTML file
-  No backend or database required

Marketing Cases

The application contains fictional cases from different industries, including:

- Specialty Coffee
- Fitness Apps
- Skincare
- Electric Mobility
- EdTech
- Grocery Delivery
- Outdoor Apparel
- Beverages
- Pet Care
- Online Courses

Each case contains:

- Company
- Industry
- Campaign Objective
- Target Audience
- Marketing Channels
- Budget Allocation
- Campaign Metrics
- Customer Comments
- Social Media Performance
- Primary Marketing Mistake
- Supporting Clues
- Correct Explanation
- Suggested Improvements

Technologies Used

- HTML5
- CSS3
- Vanilla JavaScript
- Responsive CSS

- Browser Local Storage
- Drag & Drop API

The final implementation uses a standalone HTML architecture so it can run locally without npm, backend services, APIs, databases, or external assets.

What I Learned

This project helped me understand that successful marketing is not only about generating reach or engagement.

A campaign can have impressive numbers while still failing because of:

- Poor audience targeting
- Weak positioning
- Incorrect messaging
- Channel mismatch
- Conversion friction
- Lack of customer trust
- Poor timing
- Choice overload
- Misaligned campaign objectives

The most important lesson was to look beyond vanity metrics and identify the actual bottleneck in the customer journey.

Detective Framework

I designed the investigation around five questions:

1. **What was the campaign trying to achieve?**
2. **Who was the campaign targeting?**
3. **What does the data actually show?**
4. **What are customers saying?**
5. **Which single mistake explains the strongest evidence?**

This makes marketing analysis more structured and evidence-driven.

Key Takeaway

Good marketing analysis is not about finding the biggest number. It is about finding the strongest connection between the objective, customer behavior, and campaign results.

Screenshots

Screenshots captured during the investigation:

- Case Assignment
- Investigation Board
- Evidence Analysis

- Case Closed
- Learning Report

Project Status

Status: Completed 

The Marketing Detective application is fully functional as a standalone browser-based learning experience.
